VERIFIABLE SCIENCE

AntiOxidant Formula offers a synergistic, broad spectrum of antioxidants designed to protect against free radical damage in every cell of the body. Free radicals are atoms, ions, or molecules with one or more unpaired electrons that bind to and destroy cellular compounds.¹ Dietary antioxidants disarm free radicals through a number of different mechanisms. Foremost, they bind to the free electrons, 'pairing up' with them, creating an innocuous cellular compound that the body can eliminate as waste. The antioxidants in this formula also support and enhance the body's natural defense mechanisms against free radicals: the enzymes superoxide dismutase, catalase, and glutathione peroxidase.^{2‡}
