

RevitalAge™ Products Support Youthful Gene Expression[‡]

Resveratrol supports longevity by enhancing an epigenetic enzyme, SIRT1. It also works in concert with alpha lipoic acid and acetyl-L-carnitine to cooperatively support the synthesis of new mitochondria by promoting healthy activity of another enzyme known as AMP kinase (AMPK), a cellular longevity signal that directs a genetic program of mitochondrial renewal. Sustained-release CoQ₁₀ provides 24-hour antioxidant protection with complementary support for mitochondrial bioenergetics. Pterostilbene supports healthy activation of PPAR α , a genomic receptor involved in cardiometabolic health.[‡]
